THIS IS UNEVALUATED INFORMATION 1. Kecskemet Airfield was located approximately three kilometers southeast of the City of Fecskemet and was reached by the Kecskemet-Received highway which ed the southwestern border of the field. A triple track ratiorad passed over highway about three kilometers northwest of the airfield. To the best of my recollection the longest side of the landing field (MH-SS) was about 2,000 miong and the other side (NRW-SS) was about 1,800 meters long. The width (N was 800 meters and (NE-SE) about 300 meters. The periphery of the landing five was concrete. The interior area of the field was covered with pressed sand brownish color. **Interior area of the field was covered with pressed sand to brownish color. **Interior area of the field was covered with pressed sand to high provide the city of Kecskemet was adequate for the needs of the airfield, there we no anti-aircraft installations. There were no night landing aids such as runway lights or search lights. There were no ingest flying operations. 3.	SOBJECT	Recskemet Airfield		NO. OF PAGES 3
1. Kecskemet Airfield was located approximately three kilometers southeast of to City of Kecskemet and was reached by the Kecskemet-Bekecseba highway which ed the southwestern border of the field. A triple track railroad passed ove highway about three kilometers northwest of the airfield. To the best of my recollection the longest side of the landing field (NM-SE) was about 2,000 m long and the other side (NRW-SES) was about 1,800 meters long. The width (NRW-SES) was about 1,800 meters. The periphery of the landing f was concrete. The interior area of the field was covered with pressed sand a brownish color. There were no anti-aircraft installations, busst pens for the aircraft and no air raid shelters. Although power supply by the City of Kecskemet was adequate for the needs of the airfield, there were no night landing aids such as runway lights or search lights. There were no light flying operations. The fuel supply seemed to be adequate for this airfield. The octane rating for gasoline used was 94 for YMK-9's, IL-10's and IL-2's; 87 for the YMK-11 and the ZIM. When aircraft were not flying for periods of time, 72 octane (non-euhyl) was used for ground "un-ups. During summer MSZ type oil was used, MK type for spring and autumn, and MNSZ type of winter. During the cold months Krompic was added to the colling water of YAK YAK-98's, IL-10's and IL-2's to prevent freezing. I believe that the chemics, with a capacity of 3,600 litres, and two oil trucks of 1,000 litres capacity of the cold of th				
1. Kecskemet Airfield was located approximately three kilometers southeast of the City of Fecskemet and was reached by the Kecskemet-Bekeecsaba highway which ed the southwestern border of the field. A triple track ratiroad passed over highway about three kilometers northwest of the airfield. To the best of my recollection the longest side of the landing field (NW-SE) was about 2,000 m long and the other side (NNW-SE) was about 1,800 meters long. The width (Nwas 800 meters and (NE-SE) about 300 meters. The periphery of the landing fives concrete. The interior area of the field was covered with pressed sand of brownish color. Therefore were no anti-aircraft installations, bust pens for the sureraft and no air raid shelters. Although power supplie by the City of Kecskemet was adequate for the needs of the airfield, there were no light landing side such as runway lights or search lights. There were no light flying operations. The fuel supply seemed to be adequate for this airfield. The octame rating for gasoline used was 9 for YAK-9's, IL-10's and IL-2's; 87 for the YAK-Il and the ZLIM. When aircraft were not flying for lo periods of time, 72 octame (non-shv)l was used for ground Yun-ys. During summer NEZ type oil was used, MK type for spring and autumn, and NYSZ type for winter. During the cold months Krompic was added to the cooling water of YAK YAK-93's, IL-10's and IL-2's to prevent freezing. I believe that the chemica formula for Krompic is kgCoo Oy. Aircraft were serviced by six fuel trucks, with a capacity of 3,600 litres, and two oil trucks of 1,000 litres capacity. The following points refer to sketch, Enclosure (A): POINT #1 Runway, constructed of concrete blocks, about 1,700 meters long and 50 meters vide. #2 Concrete covered taxi strip. #3 Underground Tuel storage installation. #4 Oil aircraft dumping area.				
ed the southwestern border of the field. A triple track rathroad passed ove highway about three kilometers northwest of the airfield. To the beet of my recollection the longest side of the landing field (NM-SE) was about 2,000 m long and the other side (NNM-SSE) was about 1,800 meters long. The width (N was 800 meters and (NE-SE) about 300 meters. The periphery of the landing f was concrete. The interior area of the field was covered with pressed and brownish color. The interior area of the field was covered with pressed and brownish color. There were no anti-aircraft installations, by the City of Kecskemet was adequate for the needs of the airfield, there were no night landing aids such as runway lights or search lights.
